RESCON - - SUMMIT

Inhalation & Respiratory drug delivery
Wearable injectors & Connected devices

6 - 7 OCT 2022

75 Rocketteller Plaza, 31st Floor - New York, Manhattan, USA

Sponsored by

RESCON SUMMIT

highlights innovations in the respiratory sector and connected devices. At the event we will showcase new trends in aerosol science and the future directions of inhalation drug delivery research. Further discussion focusses at on-body device design and development for large volume delivery while engaging in the latest digital applications for wearable devices.

Inhalation & Respiratory Drug Delivery (IRDD)

The IRDD Stream will focus on the challenges of bringing respiratory products to market and innovative aerosol science, including modelling and toxicology.

Presentations will also feature key case studies on the latest trends in inhalation devices, from inhaled insulin to gene therapy to overcome lung and pulmonary conditions, such as COPD, asthma and cystic fibrosis.

The event highlights some of the innovators and innovations in the respiratory sector, addresses the importance of end users in the device development process, and presents recent advancements in improving patient adherence.

Key Practical Points

- Novel technologies for pulmonary & nasal delivery
- Modern respiratory medicines
- Innovative development of inhalation devices
- Digital health combination products
- Analytical tools for inhaled medicines
- Bringing inhalation and respiratory drug delivery products to market
- Regulatory updates in the global respiratory market
- The challenges of developing inhalation devices
- Innovation in nebulised therapy
- Triple inhaler therapy in COPD
- Inhaled drugs through functional respiratory imaging (FRI) and artificial intelligence (AI)
- Dry-powder inhalers (DPIs) and Metered-dose inhalers (MDIs)
- New analytical insights into dry powder formulations for inhalation
- Characterizing aerosol dynamics
- Future directions in inhalation and respiratory drug delivery research
- Regulatory pathways for inhaled therapies
- Challenges of developing a generic inhaled product
- Explore opportunities with smart and digital inhalers

Wearable Injectors & Connected Devices (WICD)

Some analysts predict that the global wearable injectors market will reach US\$18.3 billion by 2028. This growth is being driven by the benefits these devices deliver to various stakeholders. For Pharma and Biotech companies, wearables

offer the opportunity to grow market share and reduce competition.

Worldwide, patient and provider preferences are changing due to the covid-19 pandemic. The need to reduce patient exposure to the virus and free up health-care resources is driving unprecedented change. IoT technology brings new opportunities and can help us establish a new normal with use cases and innovation for healthcare, COVID-19 testing, building health and remote device maintenance.

The conference represents a unique opportunity for learning, exchanging opinions, and expanding one's network enabled by live presentations followed by dynamic Q&A sessions – providing the attendees with valuable insights from specialists in the sphere of Medical device

Key Practical Points

- Options for activation of battery-operated Medical Devices
- Simulation and modelling approach over prototyping for the design of medical products
- Commercialization for wearable drug delivery devices
- Designing Drug Delivery Devices
- Emerging trends for on-body Injectors
- From IV to Vial-Based SC delivery
- Innovative solutions for large-volume injections
- Wearable Insulin Delivery Devices
- Compliance with EMDR, GDPR and FDA standards
- Plastic Injection Moulding
- Benefits of LCP for wearable injectors
- Artificial Intelligence in Medical Devices
- Trends and the Future of Medical Devices
- Medical Device Design Strategy
- Regulatory and legislative landscape
- Tracking Asthma With Smart Inhalers
- Wearable injectors and devices in clinical trials
- Device Manufacturing: Shifting Supply and Demand
